INTRODUCTION

This volume contains the Proceedings of the CIME conference on Algebraic Threefolds which was held at the "Villa Monastero" in Varenna (Como) during the period 14-23 June 1981.

The only exceptions are Collino's two papers which were not presented at the session, but which were included instead of his original paper because of their obvious interest.

I hope that the aim to give a complete survey of the known results in the theory of three-dimensional algebraic varieties has been attained.

I wish to thank all the participants, who were able to create a warm and stimulating atmosphere, and the CIME staff for the excellent administrative and secretarial job done.
