

## Part I

Erwin Bolthausen: Large Deviations and Interacting  
Random Walks

# Table of Contents

<b>1</b>	<b>On the construction of the three-dimensional polymer measure</b>	<b>7</b>
1.1	Introduction	7
1.2	The skeleton inequalities and boundedness properties	14
1.3	The convergence of $P_{T,\beta}^\varepsilon, \varepsilon \rightarrow 0$	32
<b>2</b>	<b>Self-attracting random walks</b>	<b>39</b>
2.1	Introduction	39
2.2	A maximum entropy principle	44
2.3	The diffusive phase for self-attracting random walks	51
2.4	The collapsed phase for self-attracting random walks	55
2.4.1	The tube property: Proof of Proposition 2.35	56
2.4.2	Tightness: Proof of Proposition 2.37	61
2.4.3	Proof of Theorem 2.34	69
2.5	A droplet construction for the Wiener sausage	72
2.6	Moderate deviation for the Wiener sausage	80
2.6.1	Introduction and heuristics	80
2.6.2	Analytical properties of the variational problem	85
2.6.3	Proof of the upper bound in Theorem 2.54	89
2.7	Remarks on the polaron problem	101
<b>3</b>	<b>One-dimensional pinning-depinning transitions</b>	<b>105</b>
3.1	Wetting transition for a one dimensional random walk	105
3.2	A heteropolymer near an interface	109
