Preface

We are now living in an era where lower-cost, higher-performance technology has the potential to become truly ubiquitous as it integrates seamlessly with our everyday lives. It could be argued that the realization of these concepts will be most significant toward promoting independent living and increasing the quality of life for the rising numbers of older people and, with it, the prevalence of chronic conditions such as cardiovascular disease, cancer and dementia. Such illnesses are placing significant and unsustainable pressure on health and social care services across the globe. In an effort to help to alleviate some of these pressures, researchers are investigating the potential to embed assistive technology within home environments and beyond. Indeed, studies have shown that people with chronic illnesses often prefer to remain living within their own homes for as long as possible. A challenge in supporting their independent living is to ensure that technology-driven health solutions provide an equal quality of care when compared to institutional care facilities. Key to this success is the provision of ‘smart’ homes, which are able to provide automated and personalized levels of support, based on the profiles of each occupant.

Realizing a smart home is, however, not an easy task. To facilitate their successful development, smart homes are typically equipped with a large number of sensors, which are attached to household objects or embedded within appliances so that they may track the occupants. These sensors generate a large amount of data, which must then be organized and mined using computation intelligence approaches to extract features that contribute most to the recognition of particular behaviors, environmental changes or to identifying activities of daily living.

A large body of research in this area now exists; however, we have not yet witnessed the advent of truly smart homes. What is needed is a coordinated and collaborative approach to technology development based on a user-centered design methodology with strong industrial and health and social care service support to ensure large-scale uptake.

This volume contains the papers presented at the 10th International Conference on Smart Homes and Health Telematics (ICOST). ICOST is now considered as a premier venue for bringing together stakeholders from clinical, academic and industrial perspectives, along with end users and their family carers to explore how smart homes and health telematics can foster independent living and offer an enhanced quality of life. The ethos behind the conference is to promote collaborative stakeholder-led research in an effort toward realizing the true potential that smart homes and health telematics services can offer.

After nine very successful conferences held in France (2003), Singapore (2004), Canada (2005), Northern Ireland, UK (2006), Japan (2007), USA (2008), France (2009), Korea (2010) and Canada (2011), the 10th International Conference on

Smart Homes and Health Telematics was hosted for the first time in the Tuscany region of Italy, during June 13–15, 2012.

Each year, the conference focuses on a particular theme. We felt it was pertinent during the 10th anniversary of the event that the theme should be related to the “Impact Analysis of Solutions for Chronic Disease Prevention and Management.” This LNCS volume presents the dynamic program of papers, which incorporated a range of technical-, clinical- and industrial-related keynote speakers, oral and poster presentations along with demonstrations and technical exhibits. The volume focuses on reflecting on the gains made in this research domain by reporting on the research findings of real-word deployments of assistive technology within a smart home context.

Competition among the 74 original submissions to the conference was very high. Submissions from authors from over 25 countries were reviewed by an International Program Committee consisting of domain experts from over 15 countries. In the end, 25 full papers were accepted (34%) for oral presentation with a further 22 short papers accepted (30%) for poster presentation at the event. These papers were categorized into a number of sessions that include: “User Engagement for Improved Adoption of Assistive Technologies”, “Self-Management and Tele-Rehabilitation”, “Advances in Remote Monitoring and Activity Recognition”, “Sensor Networks for Unobtrusive Monitoring Solutions”, and “Real World “Aware” Systems”.

We would like to take this opportunity to sincerely thank the Scientific Committee for the guidance during the preparations for the event and especially all of the Program Committee who worked tirelessly to deliver reviews within a short time frame. Their efforts have contributed toward producing this volume, which contains an exciting and varied range of scientific studies. We thank the Organizing Committee members who devoted their time over several months to prepare for and support the delivery of the conference. We would also like to specially acknowledge the EasyChair Conference System, which facilitated the paper submissions, the review process and the proceedings generation. Finally, we wish to acknowledge all of the support received from the event promoters, which helped host the conference at such a special venue.

Table of Contents

User Engagement for Improved Adoption of Assistive Technologies

Challenges of User-Centred Research in the Development of Ambient Assisted Living Systems	1
<i>Ryan Woolrych and Andrew Sixsmith</i>	
A Framework for Service Morphing and Heterogeneous Service Discovery in Smart Environments	9
<i>Hen-I Yang, Ryan Babbitt, Johnny Wong, and Carl K. Chang</i>	
Impact Analysis of Assessment, Consultation and Education Services to Support the Adoption of Smart Home Technologies, Innovations for Chronic Disease Prevention and Solutions for Independent Living	18
<i>James Barrientos, Jeffrey Soar, and Ying Su</i>	
Ensuring a Fruitful Future to Innovation and Research: Practical Guidance for the Involvement of Older People in Research	26
<i>Anne-Sophie Parent, Nena Georgantzi, and Ilenia Gheno</i>	
Fostering a Continuum of Care	35
<i>Silvio Bonfiglio</i>	

Self-management and Tele-rehabilitation

User Adoption of Mobile Apps for Chronic Disease Management: A Case Study Based on myFitnessCompanion®	42
<i>Peter Leijdekkers and Valerie Gay</i>	
Effects of In-Home Tele-rehabilitation on Task Self-efficacy in Mobility Impaired Adults	50
<i>Jon A. Sanford, Patricia C. Griffiths, and Helen Hoenig</i>	
The Use of Telerehabilitation to Provide an Exercise Program to Improve Balance in a Post-stroke Population: Preliminary Results	58
<i>Hélène Corriveau, Michel Tousignant, Sylvie Gosselin, and Patrick Boissy</i>	
Personalized Healthcare Self-management Using Social Persuasion	66
<i>Hamid Mukhtar, Arshad Ali, Sungyoung Lee, and Djamel Belaïd</i>	

A Clinical Observational Study in the CHIRON Project: Rationale and Expected Results	74
<i>Paolo Emilio Puddu, John M. Morgan, Concetta Torromeo, Nick Curzen, Michele Schiariti, and Silvio Bonfiglio</i>	

Advances in Remote Monitoring and Activity Recognition

Does Location Help Daily Activity Recognition?	83
<i>Chao Chen, Daping Zhang, Lin Sun, Mossaab Hariz, and Yang Yuan</i>	
A Robot-Environment Cooperation Architecture for the Safety of Elderly People at Home	91
<i>Antonio Andriatrimoson, Nadia Abchiche, Simon Galerne, and Etienne Colle</i>	
Medical Expert Support Tool (MEST): A Person-Centric Approach for Healthcare Management	99
<i>Carlos Cavero Barca, Juan Mario Rodríguez, Rosana Valle Soriano, Alberto Rugnone, Francesco Foresti, Elena Tamburini, Cristiano Paggetti, John Gialelis, Petros Chondros, Christos Panagiotou, Maitena Ilardia, Iñaki Eguia, Paolo Emilio Puddu, and Mitja Luštrek</i>	
The Integration of e-health into the Clinical Workflow – Electronic Health Record and Standardization Efforts	107
<i>Roberta Gazzarata, Fabio Vergari, Jan-Marc Verlinden, Francesco Morandi, Simone Naso, Viola Parodi, Tullio Salmon Cinotti, and Mauro Giacomini</i>	
Innovative Solutions in Health Monitoring at Home: The Real-Time Assessment of Serum Potassium Concentration from ECG	116
<i>Cristiana Corsi, Johan De Bie, David Mortara, and Stefano Severi</i>	

Sensor Networks for Unobtrusive Monitoring Solutions

Assessment of Custom Fitted Heart Rate Sensing Garments Whilst Undertaking Everyday Activities	124
<i>Ian Cleland, Chris Nugent, Dewar Finlay, William Burns, Jennifer Bougourd, and Roger Armitage</i>	
Multi-modal Non-intrusive Sleep Pattern Recognition in Elder Assistive Environment	132
<i>Hongbo Ni, Bessam Abdulrazak, Daping Zhang, Shu Wu, Xingshe Zhou, Kejian Miao, and Daifei Han</i>	

A Non Invasive, Wearable Sensor Platform for Multi-parametric Remote Monitoring in CHF Patients	140
<i>Héctor Solar, Erik Fernández, Gennaro Tartarisco, Giovanni Pioggia, Božidara Cvetković, Simon Kozina, Mitja Luštrek, and Jure Lampe</i>	
A Non-intrusive Monitoring System for Ambient Assisted Living Service Delivery	148
<i>Willy Allègre, Thomas Burger, Pascal Berruet, and Jean-Yves Antoine</i>	
Passive Sleep Actigraphy: Evaluating a Non-contact Method of Monitoring Sleep	157
<i>Andrew McDowell, Mark Donnelly, Chris Nugent, and Michael McGrath</i>	

Real World ‘Aware’ Systems

A Semantic Plug&Play Based Framework for Ambient Assisted Living	165
<i>Hamdi Aloulou, Mounir Mokhtari, Thibaut Tiberghien, Jit Biswas, and Lin Jin Hong Kenneth</i>	
A Macro and Micro Context Awareness Model for the Provision of Services in Smart Spaces	173
<i>Charles Gouin-Vallerand, Patrice Roy, Bessam Abdulrazak, Sylvain Giroux, and Anind K. Dey</i>	
ACARP: Auto Correct Activity Recognition Rules Using Process Analysis Toolkit (PAT)	182
<i>Vwen Yen Lee, Yan Liu, Xian Zhang, Clifton Phua, Kelvin Sim, Jiaqi Zhu, Jit Biswas, Jin Song Dong, and Mounir Mokhtari</i>	
An Extensible Situation-Aware Caring System for Real-World Smart Wards	190
<i>Yu-Chiao Huang, Chun-Feng Liao, Yu-Chun Yen, Li-Jen Hou, Li-Chen Fu, Chia-Hui Chen, and Chiung-Nien Chen</i>	
Testing Classifiers for Embedded Health Assessment	198
<i>Marjorie Skubic, Rainer Dane Guevara, and Marilyn Rantz</i>	

Short Papers

Stakeholder Involvement Guidelines to Improve the Design Process of Assistive Technology	206
<i>Leo Galway, Sonja O'Neill, Mark Donnelly, Chris Nugent, Sally McClean, and Bryan Scotney</i>	

Comparison and Complementarity of Two Approaches to Implement AAL Systems	210
<i>Jean-Baptiste L��zoray, Patrice Roy, Bessam Abdulrazak, Maria Teresa Segarra, and Andr�� Th��paut</i>	
Smart Documents for Home Automation	214
<i>Andres Albanese</i>	
Proposed Generic Method to Assess Efficiency of Smart-Walkers	218
<i>Viviane Pasqui, Ludovic Saint-Bauzel, Pierre Rumeau, and Nadine Vigouroux</i>	
A Usability Protocol for Evaluating Online Social Networks	222
<i>Kyle Boyd, Chris Nugent, Mark Donnelly, Roy Sterritt, and Raymond Bond</i>	
A Smart Home 3D Modeling Approach for Spatiotemporal Analysis	226
<i>Daniel Chamberland-Tremblay, Sylvain Giroux, and Claude Caron</i>	
Integration of HL7 Compliant Smart Home Healthcare System and HMIS	230
<i>Wajahat Ali Khan, Maqbool Hussain, Asad Masood Khattak, Muhammad Afzal, Bilal Amin, and Sungyoung Lee</i>	
Reaching Analysis of Wheelchair Users Using Motion Planning Methods	234
<i>Jing Yang, Patrick Dymond, and Michael Jenkin</i>	
Improving Telerehabilitation Technology to Challenge Chronic Disease Management	238
<i>Michel Tousignant, Simon Bri��re, Mathieu Hamel, and Catherine Pag��</i>	
Rehabilitation Training and Evaluation with the L-EXOS in Chronic Stroke	242
<i>Antonio Frisoli, Carmelo Chisari, Edoardo Sotgiu, Caterina Procopio, Marco Fontana, Bruno Rossi, and Massimo Bergamasco</i>	
Human Activity Recognition via the Features of Labeled Depth Body Parts	246
<i>Ahmad Jalal, Sungyoung Lee, Jeong Tai Kim, and Tae-Seong Kim</i>	
The Role of ICT in a Healthcare Moving from “Clinical-Centric” to “Patient-Centric”	250
<i>Silvio Bonfiglio</i>	
A Fuzzy-Based Context Modeling and Reasoning Framework for CARA Pervasive Healthcare	254
<i>Bingchuan Yuan and John Herbert</i>	

A Smart Garment for Older Walkers	258
<i>William Burns, Chris Nugent, Paul McCullagh, Dewar Finlay, Ian Cleland, Sally McClean, Bryan Scotney, and Jane McCann</i>	
Indoor Location Tracking Based on a Discrete Event Model	262
<i>Mickaël Danancher, Jean-Jacques Lesage, and Lothar Litz</i>	
Smart CDSS for Smart Homes	266
<i>Maqbool Hussain, Wajahat Ali Khan, Muhammad Afzal, and Sungyoung Lee</i>	
Context Awareness for a Smart Environment Utilizing Context Maps and Dempster-Shafer Theory	270
<i>H. Joe Steinhauer, Stephen Marsland, and Hans W. Guesgen</i>	
Peer Review Meetings of Family Doctors Show Electronic Data Collection Reduces the Variability of Pharmaceutical Prescriptions at the Local Health Authority of Empoli	274
<i>Piero Salvadori</i>	
Heart Failure Artificial Intelligence-Based Computer Aided Diagnosis Telecare System	278
