Preface

Welcome to MSEPT 2012, the International Conference on Multicore Software Engineering, Performance, and Tools. This conference emerged from the successful International Workshop on Multicore Software Engineering (IWMSE) series. IWMSE workshops were previously co-located with ICSE, the International Conference on Software Engineering, from 2008 to 2011.

The call for papers attracted 24 submissions by 63 authors from all over the world. In a double-blind review process, the Program Committee finally accepted nine papers, four of which are short papers. The accepted papers present new work on optimization of multicore software, program analysis, and automatic parallelization. In addition, these proceedings also provide new perspectives on programming models as well as on applications of multicore systems.

The MSEPT 2012 program also featured two excellent and well-known keynote speakers, Bertrand Meyer and Lionel Briand, who discussed the multicore programming challenges from a software engineering point of view.

We thank our Program Committee, the Organizing Committee of the co-located TOOLS conference, our authors, as well as the editorial team at Springer and everyone else who supported us to make MSEPT 2012 happen.

Table of Contents

Keynotes

Processors and Their Collection	1
<i>Bertrand Meyer, Alexander Kogtenkov, and Anton Akhi</i>	
Tackling the Testing and Verification of Multicore and Concurrent Software as a Search Problem	16
<i>Lionel C. Briand</i>	

Papers

Oversubscription of Computational Resources on Multicore Desktop Systems	18
<i>Constantin Christmann, Erik Hebisch, and Anette Weisbecker</i>	
Capturing Transactional Memory Application's Behavior – The Prerequisite for Performance Analysis	30
<i>Martin Schindewolf and Wolfgang Karl</i>	
A Comparison of the Influence of Different Multi-core Processors on the Runtime Overhead for Application-Level Monitoring	42
<i>Jan Waller and Wilhelm Hasselbring</i>	
Analysis of Event Processing Design Patterns and Their Performance Dependency on I/O Notification Mechanisms	54
<i>Ronald Strebellow and Christian Prehofer</i>	
Non-intrusive Coscheduling for General Purpose Operating Systems	66
<i>Jan H. Schönherr, Bianca Lutz, and Jan Richling</i>	
Automatic Parallelization Using AutoFutures	78
<i>Korbinian Molitorisz, Jochen Schimmel, and Frank Otto</i>	
Invasive Computing: An Application Assisted Resource Management Approach	82
<i>Andreas Hollmann and Michael Gerndt</i>	

Parallel Graph Transformations on Multicore Systems	86
<i>Gábor Imre and Gergely Mezei</i>	
Reduction of Electronic Control Units in Electric Vehicles Using Multicore Technology	90
<i>Georg Gut, Christian Allmann, Markus Schurius, and Karsten Schmidt</i>	
Author Index	95
