# Preface

EGOVIS and EDEM 2012 built on the experiences of its predecessors, the Electronic Government Conferences organized by DEXA, but this was the first time that the two scientific conferences joined forces in the area of eGovernment and eDemocracy.

The international conference cycle EGOVIS focuses on aspects of information systems in e-government, while the EDEM conference series focuses on electronic citizen participation (“eParticipation”). The two domains are interrelated, and the aim of the conference is to provide a cross-cutting forum where experts from both domains are able to discuss and exchange innovative ideas. Information systems are a core enabler for electronic government/governance in all its dimensions: eAdministration, eParticipation, and eVoting. Successful electronic democracy implementation has technical, legal, organizational, and social aspects. The conference has hence reflected this multidisciplinary approach. EGOVIS and EDEM 2012 brought together experts from academia, public administrations, and industry to discuss eGovernment and eDemocracy from different perspectives and disciplines, i.e., technology, policy and/or governance, and public administration.

The Program Committee accepted 27 papers from recent research fields such as open data, cloud applications, interoperability and eGovernment architectures, Web 2.0 and Web 3.0 solutions, and public dialogues. Beyond theoretical contributions, papers cover eGovernment and eDemocracy experiences from all over the world; cases are presented from Europe, Asia, America and Middle-East.

The proceedings volume reflects the session structure of the conference and groups the contributions into thematic clusters.

The Chairs of the Program Committee wish to thank all the reviewers for their valuable work; the reviews raised several research questions that were discussed in the conference. We would like to thank Gabriela Wagner for the administrative support and stimulating us in proper scheduling.

We wish pleasant and beneficial learning experiences for the readers, and we hope that the discussion will continue after the conference between the researchers and contribute to building a global community in the field of eGovernment and eDemocracy.
